• DataHealthCheck is a simple to use application that enables you to determine whether or not the files stored on your computer have been modified, infected or corrupted. The software is lightweight, portable and allows you to scan an entire directory, in order to determine the integrity of the files. • Analysis of files and folders DataHealthCheck is simple to use and allows you to verify the integrity of files within a few seconds. All you need to do is load the desired files into the software, using the drag and drop function. There is no limitation regarding the files' sizes or formats, since the software does not open or run them. Instead, it can only determine whether or not they have been modified recently. • Determining folder status When uploading a folder into DataHealthCheck, the software can easily analyze all the files contained within, regardless of type or size. Moreover, clicking the 'Check data of above folders' button allows the software to browse through the listed directories. The file hashes are created instantly and statistical data is displayed at the end of the analysis process. • User-friendly tool for file security DataHealthCheck is lightweight, portable and thus suitable for easy transportation. You can take it with you and run it from a USB flash drive or another removable device, in order to verify the file identity and integrity. Moreover, all you need to do is import files, with the help of the drag and drop feature. • DataHealthCheck Standard version - Free • DataHealthCheck Professional version - Cost Chameleon Undelete is a portable and simple utility that enables you to extract deleted files from your hard disk. With its help, you can restore the deleted files back to your hard disk. It can read registry entries and restore data from the "starred files" or folders. All operations are done in the background, so you don't have to stop working in order to use it. CounterSpy is a small to medium sized freeware to monitor your home computer, your friends PC or someone else's PC, for example an employee or your child. Most computer users use Windows and it is not easy to watch Windows and see who is on the Internet and on what sites. Microsoft has added millions of spy features, but most of them are for spying on yourself, whereas CounterSpy is designed to spy on other people. Installing CounterSpy on your friends PC is as easy as installing the software on your computer and Counter
